

Professional Summary

QA Engineer with hands-on experience in Performance Testing and a strong foundation in the Software Testing Life Cycle (STLC). Experienced with LoadRunner, Jira, and Excel, with exposure to manual testing, test automation, and software development. Interested in opportunities across Quality Assurance, Test Automation, Performance Engineering, and Software Development. A fast learner with strong analytical and problem-solving skills, motivated to build practical technical skills and contribute to improving software quality, performance, and reliability.

Experience

Software Performance Tester Cognizant

April 2026 - Now

- Executed performance and load testing using LoadRunner to evaluate application response time, stability, and scalability under different workloads.
- Developed and maintained performance test scripts, including parameterization, correlation, checkpoints, and transaction handling.
- Designed and executed load, stress, and endurance test scenarios based on business requirements and expected user workloads.
- Analyzed test results against target SLAs, evaluating key metrics including <5s response times, 3 TPH throughput, <2% error rates, and <70% CPU/memory utilization to identify bottlenecks.
- Collaborated with QA, developers, and technical teams to investigate performance issues, validate fixes, and support root-cause analysis.
- Documented defects and test findings using Jira, contributing to reliable and stable applications within a banking environment.

Technology Intern Deloitte Consulting SEA

August 2025 – January 2026

- Architected and developed a next-generation banking POC using Micro Front-End architecture and Atomic Design, delivering 20+ reusable UI components to improve modularity, scalability, and UI consistency across the application.
- Engineered analytics and structured error-handling mechanisms to capture user journeys and distinguish between user-facing and system-level errors, improving application observability and troubleshooting.
- Developed and validated an event-driven microservices architecture using Java Spring Boot and Apache Kafka, implementing Idempotency ID handling to support safe message retries and prevent duplicate transaction processing.
- Deployed an internal GenAI system on AWS EC2, containerizing 8 applications with Docker and configuring Nginx as a reverse proxy for traffic routing and centralized service management.

Programmer Intern Fifway System Sdn Bhd

August 2022 – March 2023

- Supported the development and validation of a port and vessel management administration system, focusing on system functionality, usability, and operational reliability to support day-to-day business operations.
- Engaged directly with clients to gather change requests, clarify requirements, and address user feedback, contributing to effective communication between technical teams and end users.
- Facilitated on-site user training for 30+ participants, demonstrating system workflows and supporting users through the system rollout and adoption process.
- Authored 100+ pages of role-specific user documentation, translating system functionality into clear operational procedures for multiple user groups and supporting post-deployment usage.

Projects

Nikoh.my | *Next.js, Supabase, Gemini AI, Vercel, Cloudflare, Resend*

- Built a full-stack AI-powered wedding vendor marketplace for the Malaysian market, enabling vendor discovery, comparison, inquiries, and wedding planning.
- Integrated Gemini AI to generate personalized wedding plans, including budget estimation, guest planning, timelines, vendor recommendations and perform action for calculation.
- Implemented authentication, role-based customer/vendor management, database security, and transactional email workflows, and deployed the application using Vercel, Cloudflare, and Supabase.

Warna Asmara | *Next.js, Supabase, Vercel, Cloudflare*

- Built a full-stack business management platform and corporate website for a wedding service provider, combining customer-facing features with internal business operations.
- Implemented customer management, booking tracking, service inquiries, and centralized business data management to streamline daily operations.
- Translated client requirements and budget constraints into practical technical solutions through scope and feature prioritization.

Transaction Name Generator & Comparison Tool | *Excel VBA, Macros*

- Built an Excel VBA automation tool to generate transaction names and streamline comparison activities for performance testing.
- Automated repetitive data-processing and validation tasks, reducing manual effort and improving consistency.
- Designed the workflow to accelerate performance test data preparation and validation.

Conversational Portfolio | *Next.js, Intent, Cloudflare*

- Built an interactive conversational portfolio that allows visitors to explore professional experience and projects through a natural-language interface.
- Integrated AI-powered conversation to provide contextual responses about skills, projects, and technical experience.
- Designed the application as an alternative to traditional portfolio navigation, combining web development with practical AI interaction.

Education

Bachelor of Computer Science (Computer System & Networking) Universiti Malaysia Pahang	March 2023 – January 2026 CGPA: 3.45
Diploma of Computer Science Universiti Malaysia Pahang	August 2020 – January 2023 CGPA: 3.47

Skills

Software QA: Performance Testing, Non-Functional Testing, Load Testing, STLC, LoadRunner, Jira, Postman, UAT

Programming & Development: React, TypeScript, Next.js, Java, Webpack, Git, C, Microservice, GenAI, RESTful APIs

Cloud & DevOps: VPS, AWS (EC2, IAM, S3), Docker, Nginx, CI/CD

Methodologies: Waterfall, Agile, Kanban, Scrum

Honour, Certification & Activities

• AWS Certified AI Practitioner	January 2026
• Final Year Project Finalist Bronze Award	July 2025
• Certified AI Fundamentals by IBM	March 2025
• Certified in CCNA: Enterprise Networking, Security, and Automation by CISCO	November 2024
• Anugerah Pencapaian Cemerlang Kategori Universiti by MOHE-MDEC GOT	July 2024
